

GTCO CalComp's InterWrite SchoolBoard

GTCO CalComp's electronic whiteboard is designed to give teachers and students an enhanced classroom experience. The board has non-moving parts and is fully interactive when connected to a computer. The board is wireless and has an electronic pen that acts like a mouse. Images or text appear on the screen from a computer, and teachers can use the pen like a mouse to circle or highlight words, add notes, or label images. Students can use infrared remote controls to record their responses to questions and other classroom activities, which the teacher can then record in a gradebook or chart on the whiteboard to display student feedback.

The whiteboard features a multi-colored pen and provides teachers with tools such as maps, a music staff, a protractor, and an image gallery. Teachers can add images to the gallery as well. GTCO CalComp's InterWrite also features a newly added

recording button, which lets teachers record audio and screen changes as well as lesson plans as they are created, letting students go back and review the plans. Teachers are also able to access applications or the internet with just the touch of one button. Handwritten notes can easily be converted to text, or teachers can enter their notes into the InterWrite system directly as text. The board also features a focus tool, allowing educators to zoom in or spotlight one section of the board's display. The whiteboard uses electromagnetic digitizing technology that delivers a high resolution and fast tracking when writing on the board.

GTCO CalComp's InterWrite SchoolBoard is part of the InterWrite SchoolSuite. The SchoolSuite contains products such as the InterWrite SchoolPad, a wireless pad allowing students to interact with their computer and the board; InterWrite PRS, a personal response system used to engage students in classroom discussion; and InterWrite iPanel, an LCD monitor using a pen-input device.
