GTCO CalComp issues new InterWrite whiteboard software for Macs

GTCO CalComp has released InterWrite Software version 2.3 for Mac OS X, for use with the company's InterWrite Interactive Classroom products: the InterWrite SchoolBoard, SchoolPad, and iPanel. The company says this new release offers more educational content for OS X users—from additions to the clipart image and background page galleries, to new teaching tools and several ease-of-use improvements.

New images include cell and organ diagrams, math manipulatives, additional geographical maps, handwriting tools, money images (including foreign currency), and much more. Many popular InterWrite tools also have been enhanced, the company says—including a new Spotlight tool and a new Reveal Curtain tool. These teaching tools allow teachers to hide and reveal selected information on the screen, helping them focus students' attention on critical lesson material.

The InterWrite Software is included with the company's InterWrite SchoolBoard, SchoolPad, and iPanel

products, which are all pieces of the InterWrite Interactive Classroom. InterWrite Software also reportedly works with any computer application, allowing users to leverage their existing presentation or education software to enhance the way they teach and present. Current users of InterWrite Interactive Classroom products can download the new version of the software from the GTCO CalComp web site to update their existing whiteboard configurations and other devices.
