Meeting Suite

Presenting information so that it is understood quickly and easily is vital for any project meeting. This suite of interactive meeting products is designed to facilitate knowledge sharing. The InterWrite Meeting Suite consists of three separate hardware products that can be used individually or as an integrated unit for interactive presentations or classroom training.

The InterWrite MeetingBoard is a display that allows users to write notes and highlight key points on top of a presentation with an electronic pen. Speakers can interact with their computers while standing at the board by using the pen as a mouse. Meeting annotations can be e-mailed to participants.

The InterWrite MeetingPad is a Bluetooth wireless device that permits any meeting participant in the room to interact with the presentation as if he or she was standing at the MeetingBoard. This capability also includes the ability to make annotations and control the MeetingBoard's mouse remotely. Up to seven MeetingPads can be active at one time.

The InterWrite iPanel is a liquid crystal display monitor that allows presenters to write and alter presentations with an electronic pen. Users can annotate the presentation or training material while facing the audience.

For further information, contact GTCO CalComp Incorporated, 7125 Riverwood Drive, Columbia, Maryland 21046. (800) 344-4723. www.gtcocalcomp.com.
